## **About US**

### **P2P Networking & Security**

We are an IT infrastructure service provider company that works in everything related to networking and computer through creating plans, designs, implementing IT strategies and managing mission-critical IT infrastructure for our clients.

Founded by a highly qualified, motivated and equipped team of technicians, specialized in a diverse range IT infrastructure services.

Created to meet the demand for an abundance of requests for various entities, devoted to help and support in their IT infrastructure issues and concerns. P2P networking and security leverages its in-depth industry and technical knowledge and helps clients extract maximum value from their IT investments. By providing an IT Infrastructure management platform that is cost effective, reliable and cutting edge.

Our infrastructure services offer innovative solutions that improve the mobility, flexibility, reliability and security of IT while at the same time reducing costs. These solutions include virtualized IT workspace models, where systems and data are hosted and processed securely in our high availability datacenter. Staff can access corporate data and applications anytime, anyplace and on any device.

## **Our Vision**

To strive in providing and protecting an environment characterized by an "abundance of information technology", where the IT infrastructure, services, and solutions are innovative, readily available, and used to provide exceptional support. **P2P networking and security** envisions to create groomed, technically competent and skilled intellectual IT professionals to meet the current challenges of the modern computing industry.

## **Our Mission**

We are here to build a quality and inclusive technology infrastructure, establish and maintain an effective operational environment, and deliver quality, vigilant, cost effective and vigorous technology services for our clients.

## Solutions

### ○ VoIP Solutions

Voice over Internet Protocol (VoIP) is a technology used for delivering different kinds of data from a source to a destination using IP (Internet Protocol). The data may be in many forms, including files, voice communication, pictures, and fax or multimedia messages. VoIP is most often used for telephone calls, which are almost free of charge.

VoIP technology provides fast and high quality voice communication all over the world. With an affordable software based solutions.

### ○ Microsoft Surface

**Microsoft Surface** is a series of touchscreen-based personal computers and interactive whiteboards designed and developed by **Microsoft**, running the **Microsoft Windows** operating system, apart from the **Surface Duo**, which runs on Android.

As we are a **Microsoft partner**, and **Surface Authorized Device Reseller** we intended to complete our portfolio by providing Microsoft Surface with all its accessories to our customers.
